ERRATA

Chemical formulae and activity models for biotite, muscovite, and chlorite applicable to pelitic metamorphic rocks by M. J. Holdaway (Vol. 65, 711–719).

Label for Figure 1, left side (p. 712) should read KMg3AlSi3O10(OH)2, not KFe3AlSi3O10(OH)2.

New Data: Natrophosphate by Michael Fleischer (Vol. 66, 879).

The formula of Natrophosphate should be Na7(PO4)2 F · 19H2O.

In the description of preiswerkite, on p. 1134 (abs) and p. 1135, the formula should have been O10, not O12.

The formation of pyrophyllite solid solutions by Philip E. Rosenberg and Graham Cliff (Vol. 65, 1217–1219).

In the abstract on p. 1217, the formula should read (OH)2+x, not (OH)2+1.

Figure 3 on page 413 should have been printed in Part II. On p. 416, r. 24, l = 3σ7 is correct, not l = 3σ7.

The crystal structure of santacraine, CaMn4[Si5O14](OH)2(OH) · H2O: the role of hydrogen atoms in the pyroxenoids structure by Yoshikazu Ohashi and Larry W. Finger (Vol. 66, 154–168).

The θ angle 87.13 for the II cell should read 89.13 for santacraine. This error occurs in Abstract and Table 1; but bond distances are unaffected by this correction. I thank Dr. R. C. Erd for pointing out this error.
