## **Report of the Treasurer for 1984**

This report summarizes the financial activity of the Mineralogical Society of America for the calendar year 1984. The financial statements have been audited by M. B. Hariton and Co., and a copy of the audit report is on file at the Society's business office. The financial statements given herein are taken from the audit report. The statements consist of a balance sheet (Table 1), a summary statement of income and expense for 1983 compared to 1982 (Table 2), a statement of 1983 income and expense for the Society's Funds (Table 3), and a statement of income and expense for the various subactivities of the General Operating Fund (Table 4).

The summary statement of income and expense (Table 2) shows that the Society's net worth increased in 1984 by \$47,542, considerably less than the increase in 1983. The major difference was in capital gains income of the Endowment Fund. Last year this Fund had capital gains of \$49,113 but this year had capital loss of \$8,329. Profit from operations in 1984 was \$35,957 (in comparison to \$10,110 for 1983), whereas profit from investment was only \$11,585 (in comparison to \$71,038 for 1983).

Examination of the statements for the Society's Funds provides the best means for evaluating the Society's current financial status and predicting the future. The Society has four Funds. The General Operating Fund accounts for all aspects of Society operations and consists of six subactivities (Table 4): 1) Administration; 2) Special Activities; 3) The American Mineralogist; 4) Reviews in Mineralogy; 5) Short Courses; and 6) The International Mineralogical Society meeting at Stanford, California in 1986. The Crystallography Fund and Mineralogy-Petrology Fund provide biennial research grants awarded to promising young scientists. The Endowment Fund acts as a reserve for the Society, and its income provides support for Society operations and special projects. The 1984 financial and year-end status of each of these four funds are outlined below.

The General Operating Fund (Table 4) increased in value from

\$85,581 at the end of 1983 to \$145,196 at the end of 1984. The combined *Administration* and *Special Activities* (formerly Member Activities) subactivities of the General Operating Fund had increased costs during 1984. Part of this increase was the expense of hiring Barbara Minich as Executive Secretary in May of 1984 to handle MSA business within the office of the American Geophysical Union. The Society has a contract with AGU to handle MSA business and the contract costs show up in the

<sup>1</sup>Value of Endowment Fund investments given at cost rather than market value

statements as AGU Services. The American Mineralogist showed a profit of \$25,769 in 1984, compared with a profit of \$32,921 in 1983. Income increased in 1984 while expenses actually decreased. However, the journal showed only a small operating surplus in 1984 and most of its profit can be attributed to almost \$16,000 in money market interest and a transfer of \$10,000 from the Endowment Fund to the American Mineralogist. The cost of publishing the American Mineralogist increased to \$200 per page in 1984, compared to \$185 per page in 1983. Reviews in Mineralogy showed a profit of \$29,253 in 1984, substantially up from that of \$19,553 in 1983. Fully one-half of the total books sold in 1984 were sold in the last two months of the year. This appears to be the direct result of enabling members to easily purchase books on the same form as the membership renewal. In the future, increased advertising and placement of order forms in the Lattice and other journals is expected to increase sales. The Reviews have certainly become one of the Society's greatest assets. The Mica *Short Course* produced a profit of \$2,236. *IMA86* has been added this year as a subactivity because of the commitment of the Council to sponsor the international meeting at Stanford in July of 1986. Therefore, expenses for the meeting impact the operations of the Society. It is expected that the meeting will produce no revenue for the Society nor spawn any deficits.

The two research-grant Funds—the Crystallography Fund and the Mineralogy-Petrology Fund—are invested in money market accounts and U.S. Treasury Notes. Donations to the Funds totalled \$670 to Crystallography and \$2,037 to Mineralogy-Petrology. The Crystallography Fund increased in value to \$30,838 after paying out a grant of \$1,500. The Mineralogy-Petrology Fund increased in value to \$34,305.

The assets of the *Endowment Fund* are invested in a portfolio managed by Wm. Campbell and Co. As of the end of 1984, the cost value of the Endowment was \$358,039, and the market value was \$485,203, in comparison to a market value of \$572,265 at the end of 1983.

rising costs and reduction of income require close monitoring of the financial status of the Society.

Respectfully submitted,

9

Gordon L. Nord Jr. Treasurer

In conclusion, as of the end of 1984 the Mineralogical Society of America remained in a sound financial position. Continual
