

ACKNOWLEDGEMENTS
for the preceding eight papers on
THE TANCO PEGMATITE, BERNIC LAKE, MANITOBA

These papers dealing with the Tanco pegmatite are based on studies made possible by research grants from the National Research Council of Canada, the University of Manitoba, and the Geological Survey of Canada, to R. B. Ferguson and A. C. Turnock of the Department of Earth Sciences, University of Manitoba. These funds financed a Postdoctoral Fellowship for P. Černý, and they provided support for the M.Sc. studies of I. Černá. J. D. Grice and R. Rinaldi were financed during their M.Sc. studies by a University of Manitoba Fellowship and a Canada Council Cultural Exchange Scholarship respectively.

The authors wish to thank C. T. Williams, Mine Manager of the Tantalum Mining Corporation of Canada, Ltd., at Bernic Lake, and the other members of the staff, particularly J. C. Hayward and R. A. Crouse, Assistant Manager and Geologist respectively, for their cooperation and hospitality, and for permission to publish all the available data. We also wish to thank the following colleagues and associates within the Department of Earth Sciences: A. C. Turnock for supplying some specimens, for supervising the heating experiments on the tantalum oxide minerals, and for discussions with us on many field observations and laboratory results; and K. Ramlal and R. M. Hill for carrying out or assisting with most of the chemical analyses. Discussions with, and comments on some of our manuscripts by, R. W. Hutchinson and A. D. Edgar (University of Western Ontario, London) and D. B. Stewart (U. S. Geological Survey, Washington) are much appreciated. Dr. Stewart also provided a copy of the computer program by Evans, Appleman, and Handwerker that was used for the refinements of the unit cell dimensions of most of our minerals, and he kindly made available to us his unpublished data on the experimental petrology of lithium pegmatites.

Our thanks are also due to the following for help with specific minerals: A. Sawatzky and S. Jones (Whiteshell Nuclear Research Establishment, Pinawa, Manitoba) for microprobe analyses of wodginite and related minerals; J. C. Rucklidge (University of Toronto) for the computer program for correcting microprobe analyses and for valuable discussions of our microprobe results, and his colleague E. Gasparrini for duplicate microprobe analyses, all relating to the tantalum oxide minerals; J. L. Dalton (Mineral Sciences Division, Mines Branch, Ottawa) for neutron activation

analyses for F and O of amblygonite-montebrazites; P. Povondra (Geological Institute, Czechoslovak Academy of Sciences, Prague) for complete analyses of five amblygonite-montebrazite specimens, and his colleague R. Valach for valuable advice regarding F analyses; E. H. Nickel (Mines Branch, Ottawa) and J. A. Mandarino and R. I. Gait (Royal Ontario Museum, Toronto) for providing specimens of Tanco micas and other mica specimens respectively; S. W. Bailey (University of Wisconsin, Madison), G. Gottardi (University of Modena) and M. Franzini (University of Pisa) for valuable discussions on the crystal chemistry of micas; R. V. Gaines (Pottstown, Penna.) and J. Ito (Harvard University) for their unpublished data on cesian analcime; and J. S. White, Jr. (National Museum of Natural History, Smithsonian Institution, Washington) for providing samples of lithiophosphate from Kings Mountain, N.C.
