DONALD R. PEACOR
Department of Geological Sciences, The University of Michigan, Ann Arbor, Michigan 48109, U.S.A.

As reported in the paper "Panasqueiraite, the OH-equivalent of isokite" by A.M. Isaacs and D.R. Peacor, which appeared in volume 19, pages 389-392, errors occur in the section on "Crystallography and Structure". The space group of panasqueiraite is incorrectly described as C2/c for the unit cell as reported \((a \ 6.535, \ b \ 8.753, \ c \ 6.191 \ \text{Å}, \ \beta \ 112.33^\circ)\) and should be C2/n. Furthermore, the results obtained by Deans & McConnell (1955) for isokite (which is isostructural with panasqueiraite) were incorrectly reported to be in error. The unit cell of panasqueiraite as given above may be transformed to one having \(a \ 6.535, \ b \ 8.753, \ c \ 7.498 \ \text{Å}, \ \beta \ 121.40^\circ\). With this setting the space group is C2/c and all data are consistent with those reported by Deans & McConnell (1955) for isokite.

NATO ADVANCED STUDY INSTITUTE

on

CHEMICAL TRANSPORT IN METASOMATIC PROCESSES

To be held June 3-16, 1985, in Attica and the Cyclades, Greece. Participation is limited to 95 scientists. Applications should be sent to:

Harold C. Helgeson
Department of Geology and Geophysics
University of California
Berkeley, CA 94720, USA
