

## IMA Commission on New Minerals, Nomenclature and Classification (CNMNC)

### Newsletter 64

Ritsuro Miyawaki (Chairman, CNMNC)<sup>1</sup>, Frédéric Hatert (Vice-Chairman, CNMNC)<sup>2</sup>, Marco Pasero (Vice-Chairman, CNMNC)<sup>3\*</sup> and Stuart J. Mills (Secretary, CNMNC)<sup>4</sup>

<sup>1</sup>Department of Geology and Paleontology, National Museum of Nature and Science, 4-1-1 Amakubo, Tsukuba 305-0005, Japan – [miyawaki@kahaku.go.jp](mailto:miyawaki@kahaku.go.jp);

<sup>2</sup>Laboratoire de Minéralogie, Université de Liège, B-4000 Liège, Belgium – [fhatert@uliege.be](mailto:fhatert@uliege.be); <sup>3</sup>Dipartimento di Scienze della Terra, Università di Pisa, Via Santa Maria 53, I-56126 Pisa, Italy – [marco.pasero@unipi.it](mailto:marco.pasero@unipi.it); and <sup>4</sup>Geosciences, Museums Victoria, PO Box 666, Melbourne, Victoria 3001, Australia – [smills@museum.vic.gov.au](mailto:smills@museum.vic.gov.au)

The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

#### Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula (ideal formula)

Mineral symbol

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the powder X-ray diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

#### NEW MINERAL PROPOSALS APPROVED IN OCTOBER 2021

##### IMA No. 2021-055

Ferrotorryweiserite

$\text{Rh}_5\text{Fe}_{10}\text{S}_{16}$

Ftyw

Sisim placer zone, Krasnoyarskiy kray, central Siberia, southwestern Eastern Sayans, Russia (54°44'58" N, 93°09'08" E)

Andrei Y. Barkov\*, Nadezhda D. Tolstykh, Nobumichi Tamura, Robert F. Martin, Andrew M. McDonald and Louis J. Cabri

\*E-mail: [ore-minerals@mail.ru](mailto:ore-minerals@mail.ru)

The Fe analogue of torryweiserite

Trigonal:  $R\bar{3}m$

$a = 7.069(2)$ ,  $c = 34.286(11)$  Å

5.765(39), 5.714(61), 3.049(39), 2.795(100), 2.596(38), 1.767(44),

1.524(9), 1.503(35)

Type material is deposited in the mineralogical collections of the Central Siberian Geological Museum, Sobolev Institute of Geology and Mineralogy, Akademik Koptyug Avenue, no. 3, 630090 Novosibirsk, Russia, catalogue number III-102/3

**NOMENCLATURE/CLASSIFICATION PROPOSALS APPROVED IN NOVEMBER 2021****IMA 21-G: Hiärneite: crystal structure, chemical formula and classification**

Proposal 21-G is accepted, and based on SCXRD data the formula of hiärneite is revised from  $(\text{Ca}, \text{Na}, \text{Mn}^{2+})_2(\text{Zr}, \text{Mn}^{3+})_5(\text{Sb}, \text{Ti}, \text{Fe}^{3+})_2\text{O}_{16}$  to  $\text{Ca}_2\text{Zr}_4\text{Mn}^{3+}\text{SbTiO}_{16}$ . Hiärneite belongs to the calzirtite group of minerals, which also includes calzirtite [ $\text{Ca}_2\text{Zr}_5\text{Ti}_2\text{O}_{16}$ ] and the structurally related cubic mineral tazheranite [ $(\text{Zr}, \text{Ti}, \text{Ca})(\text{O}, \square)_2$ ].

**IMA 21-H: Redefinition of bixbyite and definition of bixbyite-(Fe) and bixbyite-(Mn)**

Proposal 21-H is accepted. The name 'bixbyite' becomes a series name for material with a bixbyite structure, space group  $Ia\bar{3}$ , and  $\text{Fe}^{3+}$  or  $\text{Mn}^{3+}$  as the dominant trivalent cation (it also includes the orthorhombic polytype of  $\text{Mn}_2\text{O}_3$ , with space group  $Pcab$ ). Bixbyite-(Fe) is defined as the  $\text{Fe}^{3+}$  dominant part of the series, with an ideal formula  $(\text{Fe}, \text{Mn})_2\text{O}_3$ , and bixbyite-(Mn) is defined as the  $\text{Mn}^{3+}$  dominant part of the series, with an ideal formula  $\text{Mn}_2\text{O}_3$ .
