

## Standardization of polytype suffixes

E. H. NICKEL\*

Division of Mineral Products, CSIRO, Wembley, Western Australia 6014, Australia

The Commission on New Minerals and Mineral Names (CNMMN) of the International Mineralogical Association has published guidelines on a number of matters dealing with mineralogical nomenclature, including polytype nomenclature (e.g., Nickel and Mandarino, 1987). In essence, polytypes are distinguished by alphanumeric symbols appended to the root name and joined to it by a hyphen. The numeric part of the symbol represents the layering periodicity, and the alphabetic part, rendered in italic print, represents the crystallographic system. For example, wurtzite-4*H* is a hexagonal wurtzite polytype with a periodicity of four times the *c* dimension of the wurtzite parent.

Prior to the publication of these guidelines, various other polytype symbols had been used in the mineralogical literature, and, in an effort to standardize polytype nomenclature, members of the CNMMN decided that previous usage should be brought into conformity with current practice, which follows recommendations of the International Union of Crystallography (Guinier et al., 1984). Polytype names in the literature that require changing are as follows:

Original name	Present name	Reference
Anandite-2 <i>Or</i>	Anandite-2 <i>O</i>	Filut et al. (1985)
Gageite-1 <i>Tc</i>	Gageite-1 <i>A</i>	Ferraris et al. (1987)
Hilgardite-1 <i>Tc</i>	Hilgardite-1 <i>A</i>	Ghose (1985)
Hilgardite-3 <i>Tc</i>	Hilgardite-1 <i>A</i>	Ghose (1985)
Pyrophyllite-1 <i>Tc</i>	Pyrophyllite-1 <i>A</i>	Wardle and Brindley (1972)
Sapphirine-1 <i>Tc</i>	Sapphirine-1 <i>A</i>	Merlino (1973)
Tyretskite-1 <i>Tc</i>	Tyretskite-1 <i>A</i>	Ghose (1985)
Wollastonite-1 <i>T</i>	Wollastonite-1 <i>A</i>	Henmi et al. (1978)
Wollastonite-3 <i>T</i>	Wollastonite-3 <i>A</i>	Henmi et al. (1983)
Wollastonite-4 <i>T</i>	Wollastonite-4 <i>A</i>	Henmi et al. (1983)
Wollastonite-5 <i>T</i>	Wollastonite-5 <i>A</i>	Henmi et al. (1983)
Wollastonite-7 <i>T</i>	Wollastonite-7 <i>A</i>	Henmi et al. (1978)

\* Vice-Chairman, IMA Commission on New Minerals and Mineral Names.

It is quite likely that the mineralogical literature contains additional examples of polytype symbols that do not conform to the recommended usage. Such names should also be revised to bring them into conformity. The recommended alphabetic symbols are as follows: cubic, *C*; hexagonal, *H*; rhombohedral, *R*; trigonal, *T*; tetragonal, *Q* (for quadratic); orthorhombic, *O*; monoclinic, *M*; and triclinic, *A* (for anorthic).
