

IMA Commission on New Minerals, Nomenclature and Classification (CNMNC) – Newsletter 67

Ritsuro Miyawaki¹, Frédéric Hatert², Marco Pasero³, and Stuart J. Mills⁴

¹Chairman, CNMNC | Department of Geology, National Museum of Nature and Science,
4-1-1 Amakubo, Tsukuba 305-0005, Japan

²Vice-Chairman, CNMNC | Laboratoire de Minéralogie, Université de Liège,
Bâtiment B18, Sart Tilman, 4000 Liège, Belgium

³Vice-Chairman, CNMNC | Dipartimento di Scienze della Terra, Università di Pisa,
Via Santa Maria 53, 56126 Pisa, Italy

⁴Secretary, CNMNC | Geosciences, Museum Victoria, P.O. Box 666,
Melbourne, Victoria 3001, Australia

Correspondence: Marco Pasero (marco.pasero@unipi.it)

Published: 15 June 2022

The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

- mineral name, if the authors agree on its release prior to the full description appearing in press;
- chemical formula (ideal formula);
- mineral symbol;
- type locality;
- full authorship of proposal;
- e-mail address of corresponding author;
- relationship to other minerals;
- crystal system, space group, structure determined, yes or no;
- unit-cell parameters;
- strongest lines in the X-ray powder diffraction pattern;
- type specimen repository and specimen number;
- citation details for the mineral prior to publication of full description.

Citation details concern the fact that this information will be published in the *European Journal of Mineralogy* on a routine basis, as well as being added month by month to the commission's website. It is still a requirement for the authors to publish a full description of the new mineral.

No other information will be released by the commission.

1 New mineral proposals approved in April 2022

IMA no. 2021-087a

Fluorsigaiite

Fsig

$\text{Ca}_2\text{Sr}_3(\text{PO}_4)_3\text{F}$

Saima peralkaline complex, ca. 50 km northeast of Fengcheng City, Liaoning Province, China ($40^{\circ}58'20.6''\text{N}$, $124^{\circ}16'27.8''\text{E}$)

Bin Wu, Xiang-ping Gu*, Can Rao, Ru-cheng Wang, Fu-jun Zhong, and Jian-jun Wan

*E-mail: guxp2004@163.com

Apatite supergroup

Hexagonal: $P6_3/m$; structure determined

$a = 9.6101(2)$, $c = 7.1311(1)\text{\AA}$

3.563(15), 3.275(15), 3.144(19), 2.876(100), 2.861(96), 2.772(27), 1.991(16), 1.895(23)

Type material is deposited in the mineralogical collections of the Geological Museum of China, No. 16, Yangrou Hutong,

Xisi, Beijing 100031, People's Republic of China, catalogue number M16130

Mckelveyite-(Y): end-member formula

In the current IMA List of Minerals the chemical formula of mckelveyite-(Y) is given as $NaBa_3(Ca,U)Y(CO_3)_6 \cdot 3H_2O$. Minor uranium (ca. 0.15 apfu) was detected in the original description of the mineral [Am. Mineral. 50 (1965), 593–612]. However the ideal formula, for stoichiometric constraints, can not contain any U. A crystal structure study of mckelveyite-(Y) [Can. Mineral. 46 (2008), 195–203] clearly shows that the Ca site is occupied by calcium only. Therefore uranium does not occur, or might occur as a subordinate cation; in either case it should be omitted from the chemical formula of mckelveyite-(Y), which becomes $NaBa_3CaY(CO_3)_6 \cdot 3H_2O$. This is an executive decision taken by the officers of the CNMNC.
