

IMA Commission on New Minerals, Nomenclature and Classification (CNMNC)

NEWSLETTER 28

New minerals and nomenclature modifications approved in 2015

U. HÅLENIUS¹ (Chairman, CNMNC), F. HATERT² (Vice-Chairman, CNMNC), M. PASERO³ (Vice-Chairman, CNMNC) AND S. J. MILLS⁴ (Secretary, CNMNC)

¹ Department of Mineralogy, Naturhistoriska Riksmuseet, Box 50007, SE-104 05 Stockholm, Sweden – ulf.halenius@nrm.se

² Laboratoire de Minéralogie, Université de Liège, B-4000 Liège, Belgium – fhatert@ulg.ac.be

³ Dipartimento di Scienze della Terra, Università di Pisa, Via Santa Maria 53, I-56126 Pisa, Italy – marco.pasero@unipi.it

⁴ Geosciences, Museum Victoria, PO Box 666, Melbourne, Victoria 3001, Australia – smills@museum.vic.gov.au

The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the X-ray powder diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

**NEW MINERAL PROPOSALS APPROVED IN
OCTOBER 2015****IMA No. 2015-063**

Feodosiyite

Glavnaya Tenoritovaya (Major Tenorite) fumarole, Second scoria cone of the Northern Breakthrough of the Great Tolbachik Fissure Eruption, Tolbachik volcano, Kamchatka Peninsula, Far-Eastern Region, Russia (55° 41'N, 160°14'E, 1200 m asl)

Igor V. Pekov*, Natalia V. Zubkova, Vasiliy O. Yapaskurt, Dmitry I. Belakovskiy, Inna S. Lykova, Marina F. Vigasina, Sergey N. Britvin, Evgeny G. Sidorov and Dmitry Y. Pushcharovsky

*E-mail: igorpekov@mail.ru

New structure type

Monoclinic: $P2_1/c$; structure determined
$$a = 12.9010(6), b = 16.4193(5), c = 11.9614(5) \text{ \AA},$$

$$\beta = 113.691(6)^\circ$$

$$11.87(100), 6.585(15), 5.969(25), 5.905(16),$$

$$5.231(13), 5.183(6), 3.135(8), 2.924(11)$$

Type material is deposited in the collections of the Fersman Mineralogical Museum, Russian Academy of Sciences, Moscow, Russia, registration number 4723/1

NOMENCLATURE PROPOSALS APPROVED IN NOVEMBER 2015

IMA 15-E: Spelling of names of eight mineral species

Proposal 15-E is accepted, and the spelling of eight mineral names is modified as follows: achavalite becomes achávalite; behierite becomes béhierite; camerolaite becomes camérolaite; fabriesite becomes fabrièsite;

remondite-(Ce) becomes rémondite-(Ce); remondite-(La) becomes rémondite-(La); sénarmontite becomes senarmontite; sérandite becomes serandite.

IMA 15-I: Bafertisite

Proposal 15-I is accepted, and the chemical formula of bafertisite is revised as follows: $\text{Ba}_2\text{Fe}_4^{2+}\text{Ti}_2(\text{Si}_2\text{O}_7)_2\text{O}_2(\text{OH})_2\text{F}_2$, with $Z = 4$. Fe^{2+} is the dominant cation of the O sheet, OH and F are ordered at the X_A^O and X_M^P sites and must be presented as two groups of anions in the mineral formula: $(\text{OH})_2$ and F_2 . The structural data for bafertisite (holotype material) are: triclinic; space group $C\bar{1}$; $a = 10.665(2)$, $b = 13.743(2)$, $c = 11.721(3)$ Å, $\alpha = 90.30(4)$, $\beta = 112.27(2)$, $\gamma = 90.00(3)^\circ$, $V = 1589.8(8)$ Å³.

REVISED CHEMICAL FORMULA

A paper on the mineral benleonardite has been published recently [*Mineralogical Magazine*, **79**, 1213–1221 (2015)] in which the ideal chemical formula of the mineral is given as $\text{Ag}_{15}\text{Cu}(\text{Sb}, \text{As})_2\text{S}_7\text{Te}_4$. In this formula, based on new EPMA and SCXRD data, Cu is present as an essential component, whereas it was lacking in the previously accepted formula of benleonardite. These data were examined carefully by the CNMNC officers and were considered reliable. Accordingly it was agreed to modify the formula of benleonardite in the official IMA List of Minerals.

ERRATUM

IMA No. 2015-035 Oxo-mangani-leakeite

In CNMNC Newsletter 26, the mineral name was typed incorrectly as oxo-mangani-leakite. The correct name is oxo-mangani-leakeite.
